

# BASESTATION 3200

Certified by  
IAPMO R&T

## Built for the Water Management Professional

Baseline's BaseStation 3200™ irrigation controller is at the pinnacle of intelligent irrigation systems. It supports Baseline's patented two-wire technology and conventional wire and retrofit solutions. Plus, the advanced flow management features, flexible communication options, and industry leading water management solutions give you the tools you need to manage even the most complex sites. When operated in conjunction with BaseManager™ Plus and WeatherAccess™, the BaseStation 3200 irrigation controller meets the EPA WaterSense program's water-efficiency and performance criteria. The BaseStation 3200 combines Baseline's soil moisture sensor-based intelligent watering technology with the industry's best practices for weather-based irrigation into a single user interface. The BaseStation 3200 could help you reduce water use by up to 62 percent.

IRRIGATION SOLUTIONS

## BaseManager Central Control

BaseManager™ is a powerful cloud-based central control and remote access platform that allows any BaseStation 3200 controller to be managed remotely over the Internet. With BaseManager, you'll be able to do everything you normally have to do at the controller from the convenience of any Internet-connected device.

Every BaseStation 3200 includes a built-in Ethernet port so the controller is Internet-ready out of the box. Wireless connectivity options include Wi-Fi, cell modem, and spread-spectrum radio.

Technology has changed our world. We can do just about everything better, faster, and with more efficiency than ever before. Baseline is an industry leader in commercial irrigation control systems that leverage the latest technology. This allows landscape managers to take care of more sites with fewer resources, maintain healthy landscapes with less water, and spend less money on the equipment to make it all happen.

## Building Management Integration

Baseline's BACnet Manager™ for BaseManager™ is the industry's first solution for integrating your irrigation system with a Building Management System. With BACnet Manager, any BACnet compatible Building Management System can display important information like water-use data and system alerts from BaseStation 3200 irrigation controllers. BACnet Manager makes it easier than ever to track and achieve your water savings objectives. In contrast to the competition, Baseline irrigation controllers with BaseManager and BACnet Manager combine ease-of-use with the connectivity and interoperability required by modern Building Management System implementations.

## Munro® Pump Station Integration

Munro and Baseline have teamed up to provide a new level of control and performance. Munro Systems StandAlone Pump Stations™ and the BaseStation 3200 irrigation controllers are ready to integrate out of the box. No additional hardware, no expensive custom programming, and no recurring services or fees are required.

The BaseStation 3200 irrigation controller offers industry leading, flow fault shutdown protection, avoiding costly damage to the pump station. Working together, these features extend the life of the system and protect the customer's investment. So much so, that Munro has extended their warranty to match Baseline's 5-year warranty. This is the longest pump station warranty available in the irrigation market.

## Mobile Access™

Mobile Access™ is a mobile web application that allows you to operate your BaseStation 3200 with any web-enabled smart phone or mobile device. Mobile Access is the ultimate remote control. You'll have quick and easy access to important manual operations like turning zones on and off, starting and stopping programs, testing devices, and initiating rain delays. Mobile Access is included with every BaseManager account.

## WeatherAccess™

WeatherAccess™ for BaseManager provides a platform that combines Baseline's soil moisture sensor-based intelligent watering technology with the industry's best practices for weather-based irrigation into a single user interface. WeatherAccess integrates with the Weather Underground network so users can select the weather station that best serves their site. WeatherAccess is available at no additional cost for BaseManager Plus subscribers.

## Equipment Cost Savings

We're not just talking about what it costs to buy a controller. For what it costs to repair existing old equipment, you may be able to leverage existing wires and still upgrade to the latest technology and have money left over.

## Operational Savings

Baseline's systems are simple to use and require less hands-on adjustment than older systems. Internet connectivity means fewer trips to a site, and jobs that used to require two people can now be done with one. The bottom line—you can do more with less.

## Water Savings

Baseline's patented smart technologies and soil moisture sensors can significantly reduce water waste and materially improve the quality of a landscape. With average water savings of 62 percent, we can show you how to use less water and still have a healthy landscape.

## Advanced Flow Solutions

Add a flow meter to a BaseStation 3200 and enable the controller to do more to manage water for your site. The flow management and flow monitoring features of the BaseStation 3200 have proven to be the most advanced on the market.

With the addition of a FlowStation™, you can monitor and manage water resources across as many as 30 BaseStation 3200 controllers. The combination of the FlowStation and BaseStation 3200 is an unparalleled, yet surprisingly simple solution for complex flow situations.

## Solutions for Your Project

The BaseStation 3200 offers irrigation features that can help you manage any landscape project you might have. New construction or retrofits, big projects or small, the BaseStation 3200 has the solution.

- School districts
- Parks departments
- Municipal landscape departments
- Universities
- Commercial properties
- High-end residential properties
- Homeowner's Associations
- Water-harvesting projects
- LEED projects
- Building management projects

## Features that Matter

- Supports up to 200 zones
- Supports two-wire and conventional wire
- Supports up to 25 soil moisture sensors
- Supports 99 programs
- Supports up to 8 master valves
- Supports up to 8 flow meters
- Supports up to 8 mainlines
- Includes Baseline's advanced flow management and monitoring features
- Compatible with central control
- Supports weather-based watering
- Built-in Ethernet port
- Supports Wi-Fi, cell modem, and spread spectrum radio
- Point of connection prioritization
- Program prioritization
- Intelligent Water Rationing™
- Compatible with the FlowStation™
- Controller-level tiered passcodes
- Detailed, on-screen instructions and help

## Smart Irrigation Starts Here

The BaseStation 3200 supports up to 25 of Baseline's patented soil moisture sensors. Baseline's biSensors™ have gained a reputation in the industry for being the best soil moisture sensor available.

In order to water smart, comply with water regulations, and prevent over-watering and runoff, you have to know when to STOP irrigating.

You can guess or you can measure.

Baseline soil moisture sensors measure the actual soil moisture content where it really matters -- in the root zone. You can determine exactly how much to irrigate and when field capacity is achieved.

## Industry Leading Two-Wire

Every BaseStation 3200 supports Baseline's industry leading two-wire devices right out of the box. The secret to Baseline's powerful two-wire solution lies in Baseline's patented biLine™ technology. Baseline's biCoders™ are not only the most powerful two-wire solution on the market, they are also the easiest to install, program, and maintain.

## Efficient Retrofit Solutions

The BaseStation 3200 lets you retrofit using your existing wires, valves, and flow devices. You may be able to achieve as much as a 40 percent cost savings by combining multiple old controllers into one Baseline controller. By upgrading to a BaseStation 3200, you'll get industry leading smart irrigation technology, flow monitoring and management, and Internet connectivity.
