How to Comply with California’s Emergency Water Conservation Regulations and:
- Keep the landscape healthy
- Keep clients happy
- Avoid Fines

REGULATIONS
- Reduce water use
- Restrict available watering days
- Prevent irrigation after rain events
- Prevent runoff and other water waste
- Deal with increased water rates
- Comply or pay fines

COMPLIANCE
Baseline makes it easy to comply with water regulations

PREVENT RUNOFF
Baseline Soil Moisture Sensors know exactly how much to irrigate and when to stop irrigating

WATER DAY RESTRICTIONS
Baseline irrigation controllers are easily programmed to comply with any watering day restrictions

MANDATORY RAIN PAUSE
Baseline irrigation controllers offer multiple ways to comply with watering bans following rain events

MEASURE
Don’t try to put 5 gallons of water in a 2 gallon bucket. Baseline Soil Moisture Sensors measure the actual soil moisture content where it really matters...in the root zone.

DON’T GUESS
Weather-based controllers can only estimate the water needed to reach field capacity. A bad estimate can be costly!
