

Northwestern University Field Hockey

PRODUCT LIST

- BaseStation 3200™
- Coach's Button
- Mobile Access™

IRRIGATION CONTRACTOR

Halloran & Yauch, Inc.
Irrigation Systems

In 2000, Halloran & Yauch were listed in the top 10 irrigation companies in the United States.

Located on the shores of Lake Michigan, with the Chicago skyline in the background, Northwestern University's Lakeside Field includes a synthetic turf playing field specifically designed for field hockey, seating for fans, and extensive landscaping.

In 2015, the University replaced their Field Hockey fields with synthetic turf playing surfaces. The innovative design has reduced water use, eliminated herbicide/fertilizer runoff, and provided substantial savings in construction and maintenance.

Coaches water the artificial playing surface using Baseline's BL-5401 Coach's Button to start/stop programs. Watering the synthetic turf keeps the surface cool and clean.

There are 8 zones on the playing field with 1 sprinkler per zone.

The playing surface of a synthetic turf field must be optimized by the proper application of water.
